-!- FUNCTION: NEUROPFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M, AND H WHICH ARE INVOLVED IN THE MAINTENANCE OF NEURONAL CALIBER.
-!- DOMAIN: THE EXTRA MASS AND HIGH CHARGE DENSITY THAT DISTINGUISH THE NEUROFILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT PROTEINS REGUL OTHER TAILPIECE EXTENSIONS. THIS REGION MAY FORM A CHARGED SCAFFOLDING STRUCTURE SUITABLE FOR INTERACTION WITH OTHER NEURONAL COMPONENTS OR IONS.
-!- MISCELLANEOUS: NF-L IS THE MOST ABUNDANT OF THE THREE NEUROPALAMENT PROTEINS AND, AS THE OTHER NOMPOPLIMELIAL
INTERMEDIATE FILAMENT PROTEINS, IT CAN FORM HOMOPOLYMERIC 10-NM
                                             "Structure of the 68-kDa neurofilament gene and regulation of its

                                                                                                                                                                                                                                                                                                                                                                     MOI. Endocrinol. 9:243-254(1995).

-!- FUNCTION: INTERACTS, IN VITRO, WITH THE LIGAND BINDING DOMAIN OF THE THYROID RECEPTOR (TR). TRIP7 REQUIRES THE PRESENCE OF THYROID HORMONE FOR ITS INTERACTION.

-!- SUBCELLULAR LOCATION: Nuclear.

-!- SUBCELLULAR LOCATION: Nuclear.

-!- TISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN KIDNEY, SKELETAL MUSCLE AND HEART. LOWER LEVELS FOUND IN LUNG, LIVER AND PANCREAS.

-!- SIMILARITY: BELONGS TO THE HMG-14/HMG-17 PROTEIN FAMILY.
                                                                                                                                                                                                                       Lee J.W., Choi H.-S., Gyuris J., Brent R., Moore D.D.; "Two classes of proteins dependent on either the presence or absence of thyroid hormone for interaction with the thyroid hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Keywords: heat shock; membrane protein; mitochondrial inner membrane; mitochondrion; m
1-55/Domain: transit peptide (mitochondrion) #status predicted <TNP>
56-511/Product: heat shock protein MDJ1 #status predicted <MAT>
61-125/Domain: dnaJ amino-terminal homology <DNJ>
Cell 77, 249-259, 1994

Yittle: Mdjlp, a novel chaperone of the DnaJ family, is involved in mitochondrial bioge A; Reference number: A53500; MUID:94221642; PMID:8168133

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
